## 04/8/2023

Goal: Initial meeting to split up work and assess lab

Time: 3pm

Location: Online

Talked through the lab. By the next lab we agreed that large portions of the linker loader and modified assembler should be done so we could start working on documentation.

## 04/12/2023

Goal: Measure progress and assess, work through some example inputs/outputs.

Time: 4:30pm

Location: Online

The main purpose of this meeting was to briefly check in to ensure that we were on track with what we had discussed in the previous meeting, and ensure that we all knew exactly what we were doing leading into the weekend.

We determined that we still had the following to do:

- Linker Loader
  - Programmer's Guide
  - User's Guide
  - Testing Plan
- Modified Assembler
  - User's Guide
  - Programmer's Guide
  - Updated Testing Plan
- Integration
  - User's Guide
  - Testing Plan

With these in mind, and the knowledge that Jeremy would be busy and unavailable over the weekend, we determined that Giri would work on the modified assembler documents and the Linker Loader User's Guide, Mani would work on the Linker Loader Programmer's Guide, User's Guide and Testing Plan (since Mani was the one that did the bulk of the work on the Linker Loader already), and Sade would work on updating the Validator and the Assembler documents.

We made a plan to fully integrate the Linker Loader and Assembler over the weekend.

## 04/17/2023

Goal: Integrate all components and fix any bugs that were popping up

Time: 5:30pm

Location: 18th Avenue Library

The main purpose of this meeting was to finish integration and continue working on the documents. We did not accomplish the main goal, however we did get very close to finishing the integration. We spent too much time on the integration and not nearly enough time on the documents, and hence left with a significant amount of work left on the documents to do. We agreed to put more work in once we were all home, and with the deadline two days away we all agreed that we needed to really push more towards getting significant amounts of work done outside of meetings.

## 04/19/2023

Goal: Finish the lab

Time: 3:00pm

Location: 18th Avenue Library

Day of the deadline, the goal was to finish the project and tag it for submission. We still had a bulk of the work to do on the documents to do, and there were still several bugs popping up in the code that needed to be worked out. We set a deadline of 5:10 to have everything absolutely done so that way we could upload it to Github and tag the submission properly in time for the 5:30 deadline.
